Reissue Applications

1. This reissue is a divisional of reissue Application 09/653,482 which should contain the original claims 1-5. This reissue, as well as reissue 09/698,367 which is also a divisional of reissue Application 09/653482, should contain the original claims 1-5 but in brackets. Therefore, the Preliminary amendment canceling claims 1-5 is improper. Claims 1-5 should be presented in their entirety and in brackets in order to cancel these claims as requested by the Pre-amendment
2. There must be a statement at the beginning of each reissue specification cross-referencing all of the other reissues. Therefore, the parent reissue 09/653,482 must also include a statement cross-referencing the divisional applications 09/698367 and 09/740,068..
3. The original patent, or an affidavit or declaration as to loss or inaccessibility of the original patent, must be received before this reissue application can be allowed. See 37 CFR 1.178.
4. It is noted that Applicants have requested transfer of drawings from the parent Application and that they have made similar requests in all the other pending reissue/divisional reissue Applications. However, the drawings will be transferred to only the parent reissue 09/653482 and hence formal drawings will be required in this case.

Allowable Subject Matter

1. Claims 6-10 contain allowable subject matter over the prior art of record.
2. The following is a statement of reasons for the indication of allowable subject matter: The present claimed invention is directed to a signal transmission apparatus.

Art Unit: 2615

Each of the independent claims identify the feature of an inverse fast fourrier transformer operable to convert the modulated signal of the layer A into a transmission signal on a time axis in the layer A and to convert the modulated signal of the layer B into a transmission signal on a time axis in the layer B, wherein each transmission signal comprises an effective symbol signal and a guard interval signal, and a period of the guard interval signal in the layer A is larger than the period of the guard interval signal in the layer B. The closest prior art to Basile et al, Citta et al, and Hulyalkar et al disclose an apparatus for transmission and reception of television signals using multicarrier modulation, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4. Basile et al, Citta et al, and Hulyalkar et al disclose an apparatus for transmission and reception of television signals using multicarrier modulation

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bob Chevalier whose telephone number is 703-305-4780. The examiner can normally be reached on MM-F (9:00-6:30), second Monday off.
